The Right Partner for Developing Mobile Photovoltaic Solutions

Renewable Energy Production Self-Contained Equipment

Our vision is to provide electricity anywhere, on the field, on the water, or in the air, where an off-grid solution is needed.

Our mission is to enlarge the photovoltaic horizon making any application possible.

We can develop photovoltaic containers which can be installed in a few hours and can produce as much renewable energy as needed.

We can develop storage systems using lithium batteries, modern inverters and management solutions to provide electricity overnight or in cloudy days.

From mobile individual applications with low power appliances, up to supplying remote locations and settlements, we can develop personalized power solutions based on photovoltaic systems.
